

Lab 03 Game development

Name: Muhammad Abubakar
Roll No: BSCS25109
Section A

Screenshots of my blockout level:

Explanation of your level and its obstacles:

- **Pyramid targets** hit these with thrown balls to destroy/score
- **Glass panels** breakable obstacles blocking the path; shatter on hit
- **Laser beams (from left)** – breakable/destructible beams, not just visual hazards — throwing a ball through them clears the way
- **Ball pickups** small collectible cubes/orbs that add +3 balls to your bag when hit or walked through
- **Switch + door** gate at the end of the sequence, likely opened after clearing enough targets

Reason for my choice for the level design:

- **Simplified Smash Hit clone:** greybox primitives stand in for glass/crystal art, kept intentionally low-fidelity to test throw arc, target spacing, and pacing first
- **Laser beams and glass** are placed in the direct path so the player must engage (throw) rather than just walk around reinforcing the shooting-gallery loop
- **Ball pickups** placed near depleted zones so the player doesn't run out mid-corridor
- **Pyramid placement** (one per room) paces the difficulty first room teaches the throw, second room adds the laser + glass combo
- **Corridor between rooms** acts as a breather/reload beat between target clusters
